

Apple Stock Analytics Platform – Problem Statement

Project Overview

Build an end-to-end data analytics platform to analyze Apple stock performance using historical market data. The platform will clean, transform, store, analyze, and visualize stock data for business decision-making.

Business Problem

Financial analysts need a centralized solution to monitor stock performance, trading activity, trends, and risk. Raw stock data does not provide actionable insights, so analytics and dashboards are required.

Objectives

- Analyze Apple stock data from 2014–2026
- Measure growth trends and trading volume
- Calculate daily returns and volatility
- Create executive dashboards
- Demonstrate Python, MySQL, AWS, SQL, and Tableau skills

Expected Deliverables

- Cleaned dataset
- KPI calculations
- SQL analysis scripts
- AWS data pipeline
- Tableau dashboards
- GitHub repository with documentation
